**WARNING**

**FIRE AND EXPLOSION HAZARD**
Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion:

- Use equipment only in well ventilated area.
- Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static arc).
- Keep work area free of debris, including solvent, rags and gasoline.
- Do not plug or unplug power cords or turn lights on or off when flammable fumes are present.
- Ground equipment and conductive objects in work area. See Grounding instructions.
- Use only conductive hoses.
- Hold gun firmly to side of grounded pail when triggering into pail.
- If there is static sparking or you feel a shock, stop operation immediately. Do not use equipment until you identify and correct the problem.

**SKIN INJECTION HAZARD**
High-pressure fluid from gun, hose leaks, or ruptured components will pierce skin. This may look like just a cut, but it is a serious injury that can result in amputation. Get immediate surgical treatment.

- Do not point the gun at anyone or at any part of the body.
- Do not put your hand over the spray tip.
- Do not stop or deflect leaks with your hand, body, glove or rag.
- Do not spray without tip guard and trigger guard installed.
- Engage trigger lock when not spraying.
- Follow the Pressure Relief Procedure on page 5 if the spray tip clogs and before cleaning, checking or servicing the equipment.

**ELECTRIC SHOCK HAZARD**
Improper grounding, setup or usage of the system can cause electric shock.

- Turn off and disconnect power cord before servicing equipment.
- Use only grounded electrical outlets.
- Use only 3-wire extension cords.
- Ensure ground prongs are intact on sprayer and extension cords.

**PERSONAL PROTECTIVE EQUIPMENT**
You must wear appropriate protective equipment when operating, servicing, or when in the operating area of the equipment to help protect you from serious injury, including eye injury, inhalation of toxic fumes, burns, and hearing loss. This equipment includes but is not limited to:

- Protective eyewear
- Clothing and respirator as recommended by the fluid and solvent manufacturer
- Gloves
- Hearing protection

**PRESSURIZED ALUMINUM PARTS HAZARD**
Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents in pressurized aluminum equipment. Such use can cause serious chemical reaction and equipment rupture, and result in death, serious injury, and property damage.

General Repair Information

Pressure Relief Procedure

**WARNING**

**INJECTION HAZARD**
System pressure must be manually relieved to prevent system from starting or spraying accidentally. Fluid under high pressure can be injected through skin and cause serious injury. To reduce risk of injury from injection, splashing fluid, or moving parts, follow **Pressure Relief Procedure** whenever you:

- are instructed to relieve pressure,
- stop spraying,
- check or service any system equipment,
- or install or clean spray tip.

1. Turn pressure to zero.
2. Turn ON/OFF switch to OFF.
3. Unplug power supply cord.
4. Hold metal part of gun firmly to grounded metal pail. Trigger gun to relieve pressure.
5. Lock gun safety latch.
6. Open prime valve. Leave prime valve open until ready to spray again.

*If suspected that spray tip or hose is completely clogged, or that pressure has not been fully relieved after following steps above, VERY SLOWLY loosen tip guard retaining nut or hose end coupling to relieve pressure gradually, then loosen completely. Now clear tip or hose obstruction.*

**CAUTION**

To reduce risk of pressure control malfunction:

- Use needle nose pliers to disconnect wire. Never pull on wire, pull on connector.
- Mate wire connectors properly. Center flat blade of insulated male connector in female connector.
- Route wires carefully to avoid interference with other connections of pressure control. Do not pinch wires between cover and control box.

1. **Keep all screws, nuts, washers, gaskets, and electrical fittings** removed during repair procedures. These parts are not normally provided with replacement assemblies.

**WARNING**

**ELECTRIC SHOCK HAZARD**
**MOVING PARTS HAZARD**
**HOT SURFACE HAZARD**

To reduce risk of serious injury, including electric shock, do not touch moving or electrical parts with fingers or tools while testing repair. Shut off and unplug sprayer when inspection is complete. Install all covers, guards, gaskets, screws, washers and shroud before operating sprayer.

2. **Test repair** after problem is corrected.
3. **If sprayer does not operate properly**, review repair procedure to verify procedure was done correctly. If necessary, see Troubleshooting, pages 6 – 9, for other possible solutions.

Grounding

**WARNING**

Improper installation or alteration of grounding plug results in risk of electric shock, fire or explosion that could cause serious injury or death.

1. Ultimate Mx II 695, 795 and 1095 100–120 Vac models require a 50/60 Hz, 15A circuit with a grounding receptacle. Ultimate Mx II 1595 120 Vac models require a 50/60 Hz 20A circuit with a grounding receptacle; 220–240 Vac models require a 50/60 Hz, 10A circuit with a grounding receptacle. See Fig. 2.
2. Do not alter ground prong or use adapter.

3. **120 Vac**: A 12 AWG, 3 wires with grounding prong, 300 ft (90 m) extension cord may be used.
   220–240 Vac: You may use a 3-wire, 1.0 mm (12 AWG) (minimum) extension cord up to 90 m long. Long lengths reduce sprayer performance.

**Troubleshooting**

**Electrical**

Symptom: Sprayer does not run or stops running

- **WARNING**
  To avoid electrical shock or moving parts hazards when covers are removed for troubleshooting, wait 30 seconds after unplugging power cord for stored electricity to dissipate. Keep clear of electrical and moving parts during troubleshooting procedures.

- Relieve pressure; page 5.
- Plug sprayer into correct voltage, grounded outlet
- Set power switch OFF for 30 seconds and then ON again. This ensures sprayer is in normal run mode.
- Turn pressure control knob up 1/2
- View digital display

| E=12           | Blinks 12 x repeatedly      | High Current | 1. Check for locked or frozen pump or drive train  
2. Check for possible short circuits in wiring  
3. Check pressure output and replace transducer if pressure is excessive |
| E=13           | Blinks 13 x repeatedly      | Model not selected | Control board identity resistors must be properly clipped to identify model type, manual 310657 |
| EMPTY          | –                           | EMPTY on digital display indicates a loss of paint to the pump or a severe loss in pressure | 1. Check for empty paint condition, clogged inlet strainer, failed pump or severe leak. Turn pressure control knob to zero to restart sprayer  
2. WatchDog feature can be deactivated. See Operation Manual. |
Pressure Control Repair

Motor Control Board

Removal

1. Relieve pressure; page 5.

2. Fig. 3. Remove four screws (38) and cover (96).

3. Disconnect display connector (A) from motor control board (95).

4. Remove bottom two screws (39) and allow control panel (68) to hang down freely.

5. Disconnect control board power lead(s) (D) from ON/OFF switch (33) and motor control board (95).

6. Disconnect potentiometer connector (C) from motor control board.

7. Disconnect 15/20A switch (178) (1595).

8. Disconnect transducer connector (E) from motor control board.

9. Disconnect motor connectors (F, G and H) from motor control board.

10. Remove top two screws (39) and control box (61).

11. Remove five screws (27), three screws (102) and motor control board.

Installation

1. Fig. 3. Apply small amount of thermal compound 110009 (5) to shaded component areas on rear of motor control board (95).

   CAUTION

   To reduce risk of motor control board failure, do not overtighten screws (102) which can damage the electric components.

   2. Install motor control board (95) with five screws (27). Torque to 10–12 in-lb (1.13 – 1.35 N·m). Install and torque three screws (102) to values shown in Fig 3.

   3. Connect motor connectors (F, G and H) to motor control board.

   4. Install control box (61) with top two screws (39).

   5. Connect transducer connector (E) to motor control board.

   7. Connect motor control board power lead(s) (D) to ON/OFF switch (33).

   8. Connect potentiometer connector (C) to motor control board.

   9. Install control panel (68) with two screws (39).

   10. Connect display connector (A) to motor control board (95).

   11. Install cover (96) with four screws (38).

Pressure Adjust Potentiometer

Removal

1. Relieve pressure; page 5.

2. Fig. 3. Remove four screws (38) and cover (96).

3. Disconnect potentiometer connector (C) from motor control board (95).

4. Remove knob (34) with a hex wrench.

5. Remove gasket (115), nut and potentiometer (82) from control panel (68).

Installation

1. Install gasket (115), nut and potentiometer (82) on control panel (68). Torque nut to 30–35 in-lb (3.38–3.95 N·m).

2. Install knob (34) with a hex wrench.

3. Connect potentiometer connector (C) to motor control board.

4. Install cover (96) with four screws (38).
Pressure Control Transducer

Removal

1. Relieve pressure; page 5.
2. Fig. 3. Remove four screws (38) and cover (96).
3. Disconnect transducer connector (E) from motor control board (95).
4. Disconnect potentiometer connector (C) from motor control board.
5. Remove four screws (39) and control box (61). Allow control panel to hang down freely.
6. Remove transducer (86) and o-ring (20) from filter base (67).

Installation

1. Install o-ring (20) and transducer (86) in filter base (67). Torque to 35–45 ft-lb (47–61 N·m).
2. Install grommet (40) onto transducer (86).
3. Connect transducer connector (E) to motor control board.
4. Install control box (61) and control panel (68) with four screws (39).
5. Connect potentiometer connector (C) to motor control board.
6. Install cover (96) with four screws (38).

120 Vac

Fig. 3
Drive and Bearing Housing Replacement

**CAUTION**

Do not drop gear cluster (89) when removing drive housing (90). Gear cluster may stay engaged in motor front end bell or drive housing.

Disassembly

1. Relieve pressure; page 5.
2. Remove screw (31), two nuts (24), pail hanger (55) and pump rod cover (108).
3. Remove pump (91); *Displacement Pump Replacement*, page 16.
4. Fig. 4. Remove two screws (31) and shroud (72).
5. Remove four screws (31) and front cover (51).
6. Remove four screws (14) and washers (12) to remove bearing housing (83) and connecting rod (85).
7. Remove five screws (6) and pull drive housing (90) off motor (84).

Assembly

Fig. 5. Make sure gear (89) and thrust washers (28, 30, 90a, 36) are in place. Brush grease onto gear teeth.

1. Fig. 4. Push drive housing (90) onto motor (84) and install with five screws (6). Torque to 190–210 in-lb (21–23 N·m).
2. Install bearing housing (83) with four screws (14) and washers (12). Torque to 25–30 ft-lb (34–40 N·m).
3. Install front cover (51) with four screws (31).
4. Install shroud (72) with two screws (31).
5. Install pump (41); *Displacement Pump Replacement*, page 16.
6. Install pump rod cover (108) and pail hanger (55) with screw (31) and two nuts (24).
Motor Replacement

Removal

1. Relieve pressure; page 5.

2. Remove pump (91); **Displacement Pump Replacement**, page 16.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not drop gear cluster (89) when removing drive housing (90). Gear cluster may stay engaged in motor front end bell or drive housing.</td>
</tr>
</tbody>
</table>

3. Remove drive housing (89); **Drive Housing Replacement**, page 12.

4. Fig. 5. Remove four screws (38) and control cover (96).

5. Remove bottom two screws (39) and allow control panel (68) to hang down freely.

6. Disconnect all three motor leads from motor control board (95).

7. Remove top two screws (39) and control housing (61).

8. Remove strain relief (29) from motor wires and power bar plate (69).

9. Remove two screws (23) and nuts (19) on side opposite control.

10. Loosen two nuts (19) on side near control and remove motor (84) from cart frame (62).

Installation

1. Slide new motor (84) under two screws (23) in cart frame (62) near control.

2. Install two screws (23) and nuts (19) on motor side opposite control.

3. Tighten all four screws (23) and nuts (19). Torque nuts to 115–135 in-lb (13–15 N·m).

4. Install strain relief (29) onto motor wires and into power bar plate (69).

5. Install control housing (61) with top two screws (39).

6. Connect all three motor leads to motor control board (95).

7. Install control panel (68) with two screws (39).

8. Install control cover (96) with four screws (38).

9. Install drive housing (42); **Drive Housing Replacement**, page 12.

10. Install pump (13); **Displacement Pump Replacement**, page 16.
Displacement Pump Replacement

See manual 310643 for pump repair instructions.
See manual 309943, 309944 or 309951 – 309954 for applicable sprayer part number references.

Removal

1. Flush pump (13).

2. ![Warning] Relieve pressure; page 5.

3. Fig. 6. Remove screw (31) and slide pump rod shield (108) forward.

![Fig. 6](ti4258a)

4. Fig. 8. Cycle pump in JOG mode until pump pin (44) is in position to be removed. Turn power switch OFF and unplug power cord. Push up retaining ring (43) and push pump pin out.

5. Fig. 7. Remove suction tube (76), hose (94) and any washers and o-rings.

![Fig. 7](ti4258a)

Installation

**WARNING**
If pump pin works loose, parts could break off due to force of pumping action. Parts could project through the air and result in serious injury or property damage.

**CAUTION**
If the pump jam nut loosens during operation, the threads of the drive housing will be damaged.

1. Fig. 8. Extend pump piston rod 1.5 in. Apply grease to top of pump rod at (A) or inside connecting rod.

![Fig. 8](ti4258a)

2. Install pump pin (44). Verify retaining spring (43) is in groove of connecting rod (85).

3. Push pump up until pump threads engage.

4. Screw in pump until threads are flush with drive housing opening. Align pump outlet to back.

5. Fig. 7. Install washers, o-rings and suction tube (76) and hose (94).

6. Fig. 9. Screw jam nut (56) up onto pump until nut stops. Tighten jam nut by hand, then tap 1/8 to 1/4 turn with a 20 oz (maximum) hammer to approximately 75± 5 ft–lb (102 N·m).

![Fig. 9](ti4258a)

7. Fig. 6. Install pump rod shield (108) with screw (31).

8. Fig. 10. Fill packing nut with Graco TSL until fluid flows onto top of seal.
